

Learning Objectives for MACS

The Master of Arts in Cross-disciplinary Studies (MACS) teaches students about the meaningful synergy among various disciplines. With a team in interdisciplinary faculty members from diverse cultural, academic, and professional backgrounds, students learn how to combine the theories and practical applications of such areas as gender, diversity, culture, environmental studies, the health sciences, human rights, and qualitative research.

Students in MACS have experiential learning opportunities in a variety of settings, linked with their professional interests. Students have been engaged in profit and not-for-profit organizations, law enforcement agencies, schools, colleges and universities, and many others.

Graduates have gone on to pursue doctoral degrees, law school, and other graduate education, as well as careers in areas such as teaching, not-for-profit management, social service organizations, student affairs, coaching, and counseling.
